Do You Control Your Subcontracted Stock?

- Do you sometimes believe that you are the official supplier to other clients of your subcontractors?

    Unfortunately, the lack of control over company stocks encourages subcontractors to draw on your stocks. With **DCision ERP** you will control:

    - Receipt of stocks directly sent to your suppliers (Drop Ship)

    - Theoretical consumption associated with each production order

    - The quantities delivered directly to your customers by your subcontractors

- Do you know at all times what your stocks are with your subcontractors?

    Thanks to a quantity search tool (available at any time by a single button), you will be able to know in real time the quantity and location of all your stocks.

    The system also gives you a view into the future. All future stock movements entered in the system (by purchase order, receipt, production order, sales order, etc.) are in fact also presented.

- Do you have a methodology and tools that allow you to communicate your needs precisely to your subcontractors and keep documentary evidence?

    By centralizing all the information relating to the nomenclature of products, sales, purchases, production and subcontracting, you will facilitate punctuality, consistency and precision in your communications, both internal and with your customers, suppliers and your subcontractors. It will also be much easier to identify and consequently correct the incongruities.

- Do stock confirmations from your subcontractors often cause unpleasant surprises?

    By validating with your subcontractors the quantity of material consumed for each manufacturing order, you will know the source of overuse and thus plan replenishment in time. No more surprises!
